

K J Somaiya Institute of Engineering and Information Technology An Autonomous Institute affiliated to University of Mumbai Accredited by NAAC and NBA, Approved by AICTE, New Delhi

K J Somaiya Institute of Engineering and Information Technology, Sion, Mumbai

An Autonomous Institute under University of Mumbai

Autonomy Syllabus Scheme-I (2021-22)

Bachelor of Technology

in

Electronics Engineering (ETRX)

(Last Year-Semester-VII)

(With Effect from AY 2021-22)

Somaiya Ayurvihar Complex, Eastern Express Highway, Sion (East), Mumbai. 400 022, India Telephone: (91-22)24061404, 24061403 email: principal.tech@somaiya.edu, Web:www.somaiya.edu/kjsieit

From the Principal's Desk:

The academic reforms recently recommended by the AICTE and UGC have effectually strengthened the higher education system in India. To adhere to the status quo and enhance the academic standards and quality of engineering education further, it is essential to assimilate innovation and recurrent revision in curriculum, teaching-learning methodology, examination, and assessment system.

In congruence with it, the University of Mumbai has adapted Outcome-Based Education (OBE) system and has revised the engineering curriculum thrice in the last decade as Rev 2012, Rev 2016, and the recent Rev 2019, 'C' scheme focusing on cutting-edge technology courses.

K. J. Somaiya Institute of Engineering and Information Technology, being an autonomous institute possesses more flexibility in adapting newer approaches to reach higher levels of excellence in engineering education. This first syllabus scheme under the autonomy comprises state-of-the-art courses and laboratory sessions on emerging areas of technology. The syllabus is designed with an objective to foster the students for developing innovative solutions to real-world issues of the society and/or industry through the acquired knowledge. The induction program for the students is deliberated as per guidelines of AICTE and shall be executed over the entire First Year.

With an ideology that the root of innovation is 'interest', the curriculum offers a wide range of elective courses - grouped into core and inter-disciplinary domains. At par with international engineering education, the students can choose to study courses concerning areas of their interests.

The curriculum introduces Skill-Based Learning (SBL), Activity-Based Learning (ABL), and Technology-Based Learning (TBL) as eXposure (SAT) courses - that assure X factor in all the students of the institute. The SAT courses shall be practiced across the first three years of engineering, focusing on graduate attributes like work ethics, responsibilities towards society, problem-solving ability, communication skills, motivation for life-long learning, leadership and teamwork, etc. that may not be copiously imbibed through regular engineering courses. The proficiencies acquired herein shall open huge employment and entrepreneurial opportunities for the students.

Students of the institute are already provided exposure to the work culture and trends in industries through live / collaborative projects / product developments, etc. Under autonomy too, through the component of Project-Based Learning included in the syllabus, the students shall develop Mini, Minor, and Major projects in Second, Third, and Last Year respectively concerning healthcare, agriculture, societal / industrial need-based problems, etc. as well as pursue internships at the end of each semester / year - making them industry-ready engineers. The blend of all these learning components in the curriculum shall strengthen the research and innovation ecosystem in the institute — for best benefits of the students.

This first syllabus shall be effective from Academic Year 2021-22 to all four years at once. It comprises 165 credits, follows the AICTE model curriculum, focuses on learner-centric approach as well as continuous evaluation, and shall offer the ideal learning experience for the students of the institute.

In the coming years, the institute shall also offer an Honours degree for students who are desirous of pursuing their special interest areas in industry-relevant tracks like Artificial Intelligence, Internet of Things, Cyber Security, etc. Through joint efforts of all stakeholders, strategic planning, and efficient execution of neoteric educational practices with hi-tech wizardry, we shall strive to become a role model for all autonomous institutes across the nation.

Dr. Suresh Ukarande Principal and Chairman - Academic Council

Member Secretary, Academic Council's Preamble:

We, Board of Studies in Computer Engineering (CE), Information Technology (IT), Artificial Intelligence and Data Science (AI-DS), Electronics and Telecommunication (ET) and Electronics Engineering (EX) are very happy to present 4 years of undergraduate and 2 years of post-graduation in Artificial Intelligence (AI), Engineering technology syllabus effective from the Academic Year 2021-22 under the autonomy status granted to our institute, K J Somaiya Institute of Engineering and Information Technology (KJSIEIT). We are sure you will find this syllabus interesting, challenging and meeting the needs of Industry 4.0.

UGC states the benefits of granting academic autonomy to higher education institutes as the freedom to modernize curricula, making it globally competent, locally relevant and skill oriented to promote employability'. Thus exercising academic freedom by eligible and capable institutes is the need for developing the intellectual climate of our country and bringing and promoting academic excellence in higher education system. KJSIEIT under its first autonomous syllabus scheme (KJSIEIT-Scheme I) is keen in providing globally required exposure to its learners focusing sound theoretical background supported by practical experiences in the relevant areas of engineering and technology.

Besides engineering and technology foundation, Industry 4.0 demands modern, industry-oriented education, up-to-date knowledge of analysis, interpretation, designing, implementation, validation, and documentation of not only computer software and systems but also electronics and communication systems, hardware devices and tools, trained professional, ability to work in teams on multidisciplinary projects, etc. Thus KJSIEITs autonomy Scheme-I syllabus has been designed for the learners to successfully acquaint with the demands of the industry worldwide, life-long experiential learning, professional ethics with universal human values and training for needed skillsets and in line with the objectives of higher and technical education, AICTE, UGC and various accreditation and ranking agencies by keeping an eye on the technological developments, innovations, and industry requirements.

The salient features of KJSIEITs autonomy Scheme-I syllabus are:

- 1. Total 165 credits ensuring extra time for students' experiential learning through extracurricular activities, innovations, and research.
- 2. Introduction of Skill Based, Activity Based, Technology based and Project Based learning to showcase learners' creativity, interest and talent by developing additional skillsets, social involvement and contributions through activities, case studies, field visits, internships, creative learning, innovative mini, minor and major project developments, strengthen their profile and increasing the chances of employability.
- 3. Value addition learning through MOOCs platforms such as IBM-ICE, Coursera, NPTEL, SWAYAM, Spoken Tutorial etc.
- 4. Emerging areas of technology learning in Artificial Intelligence, Machine learning, Data Science, Internet of things, Cyber Security, Block chain, augmented and Virtual reality.

We would like to place on record our gratefulness to the faculty, alumni, students, industry experts and stakeholders for having helped us in the formulation of this syllabus.

Dr. Sunita R Patil

Member Secretary, Academic Council and Vice Principal, KJSIEIT, Sion

Preface by Board of Studies in Electronics Engineering:

We, the members of Board of Studies of B.Tech in Electronics Engineering are very happy to present a syllabus of Third and Last Year of B. Tech in Electronics Engineering with effect from the Academic Year 2021-22. We are assured that you will discover this syllabus interesting and challenging.

There are nine emerging technology thrust areas declared by AICTE, as an Electronics Engineer he/she should have knowledge about all the emerging technologies which will rules the industries in future so we have touched almost every emerging areas while deciding the courses and contents there in. The syllabus focuses on providing a sound theoretical background as well as good practical exposure to students in the relevant areas. Program Educational Objectives are considered while deciding different courses. It is envisioned to deliver a modern, industry-oriented education in Electronics Engineering. It aims at creating skilled engineers who can successfully acquaint with the demands of the industry worldwide. They obtain skills and experience in up-to-date knowledge to analysis, design, employ, technologies, software and systems.

At the beginning of every course we have added two theory lectures for prerequisites and course outline and at the end one theory lecture added for coverage of course conclusion which includes recap of modules, outcomes, applications, and summarization. We have mapped Course outcomes, PBL outcomes, Skills outcomes, Activity outcomes and TBL outcomes module wise throughout the syllabus. Faculty in this program adopted collaborative, co-operative and online teaching learning techniques during coverage of the course; this will help students to understand each course in depth. The designed syllabus promises to achieve the objectives of affiliating University, AICTE, UGC, and various accreditation agencies by keeping an eye on the technological developments, innovations, and industry requirements.

We would like to show our appreciation to the faculties, students, industry experts and stakeholders assisting us in the design of this syllabus.

1UETC701	Power Electronics	(3+0+0)			
Prerequisite:	Electrical Network Analysis and Synthesis				
	Electronic Devices and Circuits-I Electronic Devices and Circuits-II				
Course Objectiv	2. To highlight power electronics based rectifiers,	inverters	and chopp	ers.	
Couse Outcome	 After successful completion of the course, student v 1. Analyse behaviour of semiconductor devices as 2. Design different triggering circuits for SCR 3. Analyse various single phase controlled rectifier 4. Analyse various DC-AC inverter circuits. 5. Simulate various DC-DC converter circuits 6. Analyse AC voltage controllers and Cyclo-converter 	power sv rs	le to vitches.		
Module No. & Name	Sub Topics	CO mapped	Hrs./ Subtopic	Total Hrs. /Module	
I. Prerequisite and Course Outline	Prerequisite Concepts and Course Introduction		02	02	
1. Power semiconductor	1.1 Principle of operation of SCR, static and dynamic characteristics, gate Characteristics	CO1	02	03	
devices	1.2 Principle of operation, characteristics, ratings and applications of: TRIAC, DIAC		01		
2. SCR: Triggering, commutation	2.1 Methods of turning ON SCR (types of gate signal), firing circuits (using R, RC, UJT, Ramp and pedestal, inverse cosine)	CO2	02	06	
and Protection	2.2 Design of commutation circuits		02]	
Circuits	2.3 Protection of SCR		02		
3. Single-phase Controlled Rectifiers	3.1 Introduction to uncontrolled rectifiers, Half wave controlled rectifiers with R, RL load, effect of free-wheeling diode		02		
	3.2 Full wave fully controlled rectifiers (centre- tapped, bridge configurations), full-wave half controlled (semi-converters) with R, RL load, effect of freewheeling diode and effect of source inductance.	CO3	03	08	
	3.3 Calculation of performance parameters, input performance parameters (input power factor, input displacement factor (DF), input current distortion factors (CDF), input current harmonic factor (HFD), Crest Factor (CF)), output performance parameters.		03		
4. Inverters	4.1 Introduction to basic and improved series/parallel inverters, limitations.		02		
	4.2 Introduction, principle of operation, performance parameters of Single phase half <i>I</i> full bridge voltage source inverters with R and R-L load	CO4	03	08	

	4.3 Voltage control of single phase inverters using PWM techniques, harmonic neutralization of inverters, applications		03		
5. DC-DC converters	5.1 Basic principle of step up and step down DC-DC converters, DC-DC switching mode regulators: Buck, Boost, Buck-Boost, Cuk Regulators(CCM mode only)	CO5	03	- 08	
	5.2 Voltage commutated, current commutated and load commutated DC-DC converters	005	03		
	5.3 Applications in SMPS, Battery charging systems.		02		
6. AC Voltage Controllers	6.1 Principle of On-Off control, Principle of phase control, single phase bidirectional control with R and RL load	CO6	03	06	
and Cyclo- convertors	6.2 Introduction, single phase and three phase Cyclo- converters applications	-	03

Course Object	ives	5.VLSI Design 1. To teach analysis and design of building blocks	of CMOS	Analog VI	SI
		Circuits. 2. To highlight the issues associated with the CMO 3. To emphasize upon the issues related to mixed s	S analog V ignal layou	VLSI circui ut design.	
Couse Outcom	es:	 After successful completion of the course student v Discuss tradeoffs involved in analog VLSI Circ Explain single stage amplifier, differential ampl Explain MOS operational amplifier. Explain Mixed signal circuits, oscillators and pl Discuss verifications of issues involved in analo Describe about Data converters fundamentals and 	uits. ifier. nase locke og and mix	d loop. ed signal c	ircuits.
Module No. & Name		Sub Topics	CO mapped	Hrs. /Subtopic	Total Hrs./ Module
I. Prerequisite and Course Outline	Prerequ	isite Concepts and Course Introduction		02	02
1.Analog building blocks	MOS 7 current	ed for CMOS analog and mixed signal designs, Fransistor as sampling switch, active resistances, source and sinks, current mirror.		04	
	Conside indeper	Itage References: Band Gap References, General erations, Supply-independent biasing, Temperature ident references, PTAT current generation and int Gm biasing	CO1	04	08
2.Amplifier Fundamentals	Bandwi load, d load, sc	ngle Stage Amplifiers: Basic concepts, Gain dth (GBW),Common-source stage (with resistive iode connected load, current-source load, triode burce degeneration), source follower, common- ge, cascode stage, folded cascade stage.		04	
	operations operations operations of the second seco	ferential Amplifiers: Single ended and differential on, Basic differential pair, large signal and small behaviours, Common-mode response, Differential th MOS loads.	CO2	03	10
	Noise, I stage an	ise: Statistical Characteristics of Noise, Types of Representation of Noise in circuits, Noise in Single mplifiers (CS, CD, CG stages),noise in differential oise bandwidth, noise figure, noise temperature.		03	
3. MOS Operational Amplifiers	Conside	ability and Frequency Compensation: General erations, Multipole systems, Phase margin, ney compensation, compensation of two stage op-	CO3	02	06

				1
	3.2 Op-amp Design: General Considerations, performance parameters, One- stage op- amps, Two-stage op-amps,			
	Gain Boosting, Common-mode feedback, Input range			
	limitations (ICMR), Slew Rate, Power supply rejection,		04	
	Noise in op-amps. Design of single ended and double			
	ended two stage Op-amps			
4. Mixed	4.1 Basic Concepts: AMS design flow, ASIC, Full custom			
Signal	design, Semi- custom design, System on Chip, System in		03	
Circuits	package, Hardware software co-design, and mixed signal		03	
	layout issues.			
	4.2 Oscillators: General considerations, Ring oscillators,	CO5	02	07
	LC oscillators,VCO,	-	02	-
	4.3 Phase-Locked Loop: Simple PLL, Charge pump PLL,			
	Non-ideal effects in PLL, Delay locked loops and		02	
5. Data	applications of PLL in integrated circuits5.1 Fundamentals: Analog versus discrete time signals,			
Converter	converting analog signals to data signals, sample and hold		03	
Fundamentals	characteristics. DAC specifications, ADC specifications.		03	
and	5.2 DAC architectures: Digital input code, resistors string,	-		-
Architectures	R-2R ladder networks, current steering, charge scaling	CO6		08
	DACs, Cyclic DAC, pipeline DAC ADC architectures:		05	
	Flash, Two Step Flash, Pipeline ADC, Integrating ADCs,			
	Successive approximation ADCs			
II. Course	Recap of Modules, Outcomes, Applications, and		01	01
Conclusion	Summarization.		01

3 https://www.edx.org/course/introduction-to-cloud-computing-6

Assessment:

Continuous Assessment for 40 marks:

- 1. Test 1 15 marks
- $2. \quad Test \ 2-15 \ marks$
- 3. Internal assessment 10 marks

Internal assessment will be based on assignments/quizzes /case study/activity conducted by the faculty

End Semester Examination will be of 60 marks for 3 hours duration.

Term work:

- 1. Term work should consist of a Minimum of 8 experiments.
- 2. Journal must include at least 2 assignments on content of theory and practical of the course "Cloud Computing".
- 3. The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and Minimum passing marks in term work.
- 4. Total 25 Marks (Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks.

Course Code	Course Name	Cred	lits (TH+P+	TUT)
1UETDLC7043	Robotics		(3+0+0)	
Prerequisite:	1.Applied Mathematics III,			
	2. Applied Mathematics IV,			
	3. Linear Control Systems			
Course Objectives:	1. To study basics of robotics			
	2. To familiarize students with kinematics & dynamics			
	3. To familiarize students with Trajectory & task planr	ung of rol	oots.	
	4. To familiarize students with robot vision			
Couse Outcomes:	At the end of completing the course of Robotics, a stu	dent will	be able to:	
	1. Describe the basic concepts of robotics.			
	2. Perform the kinematic and the dynamic analysis of	robots.		
	3. Perform trajectory and task planning of robots.	• 1		
	4. Describe importance of visionary system in robotic	manipula	tion.	
	5. Simulate Planer motion and Task planner.

Course Code	Course Name	Cred	its (TH+P+]	ГUT)			
1UETDLC7044	Data Science and Applications		(3+0+0)				
Prerequisite:	Database Management System						
Course Objectives:	1. To provide strong foundation for data science and application area related to it and understand the underlying core concepts and emerging technologies in data science.						
Couse Outcomes:	 On completion of the course, learner will be able to - 1. Apply data science processes to an e-commerce data and demonstrate the estimation methods for analyzing this data. 2. Apply appropriate machine learning algorithms for classification. 3. Compare and choose one data visualization method for effective visualizat data. 4. Design a model of recommendation system based on the content of the data. 5. Apply standard clustering methods to analyze social network graph.

	ssessment - 10 marks	vitry a an dua	tad by the fo	aultr

Internal assessment will be based on assignments/quizzes /case study/activity conducted by the faculty End Semester Examination will be of 60 marks for 3 hours duration.

Course Code 1UILC7059	Course Name Development Engineering	Cr	edits (TH+P (3+0+0)	, ,
Prerequisites				
Course Objectives:	 To understand the issues and principles of Design o To list the guidelines for designing experiments. To become familiar with methodologies that can be designs for robustness and optimization. 	-		th
Couse Outcomes:	 Upon completion of the course, the learners will be ab Plan data collection to turn data into information a appropriate action. Analyze the different fitting regression models. Apply different two-level factorial designs. Differentiate the different fractional factorial metho Apply the methods taught to real life situations. Explain methods to plan, analyze, and interpret the methods 	nd to make ds.		nat lead to
Module No. & Name	Sub Topics	CO mapped	Hrs. /Subtopic	Total Hrs./ Module
I. Prerequisite and Course Outline	Prerequisite Concepts and Course Introduction		02	02
1.Introduction	1.1 Strategy of Experimentation, Typical Applications of Experimental Design.	CO1	01	03
	1.2 Guidelines for Designing Experiments, Response Surface Methodology.	COI	02	03
2. Fitting Regression Models	2.1 Linear Regression Models, Estimation of the Parameters in Linear Regression Models, Hypothesis Testing in Multiple Regression.		04	
	2.2 Confidence Intervals in Multiple Regression, Prediction of new Response Observation, Regression Model Diagnostics, Testing for Lack of Fit.	CO2	04	08
3.Two Levels Factorial Designs	3.1 The 2^2 Design, The 2^3 Design, The General 2^k Design		03	
	3.2 A Single Replicate of the 2 ^k Design, The Addition of Center Points to the 2 ^k Design, blocking in the 2 ^k Factorial Design, Split-Plot Designs.	CO3	05	08
4.Two Levels Fractional Factorial Methods	4.1 The One-Half Fraction of the 2^k Design, The One-Quarter Fraction of the 2^k Design, The General 2^{k-p} Fractional Factorial Design.	CO4	04	08
	4.2 Resolution III Designs, Resolution IV and V Designs, Fractional Factorial Split-Plot Designs.		04	
5.1 Response Surface Methods	5.1Introduction to Response Surface Methodology, The Method of Steepest Ascent.	CO5	04	08
and Designs	5.2Analysis of a Second-Order Response Surface, Experimental Designs for Fitting Response Surfaces.		04	00
6.Taguchi Approach	6.1Crossed Array Designs and Signal-to-Noise Ratios.	CO6	02	04
	6.2Analysis Methods, Robust Design examples.		02	

II. Course	Recap of Modules, Outcomes, Applications, and		01	01

3.	Encode and decode the given text information using Run Length Encoding technique of text compression.	LO2, LO4, LO5, LO6	02
4.	Implement Discrete Cosine Transform for image compression a) One Dimensional DCT b) Two Dimensional DCT		02
5.	Study the effect of Delta Modulation and Demodulation on a given sinusoidal signal. Also show slope overload cases.	LO3, LO4, LO5, LO6	02
6.	Study the effect of Uniform and Non uniform quantization on the given speech signal.		02
7.	Implement PCM technique for audio compression.		02
8.	Implement DPCM method for audio compression		02
9.	Encode and decode dictionary contents using LZ 77/LZ 78/ LZW compression Techniques.	LO2, LO4, LO5, LO6	02

Term wor	k:		

- 1. Term work should consist of a Minimum of 8 experiments.
- 2. Journal must include at least 2 assignments on content of theory and practical of the course "Data Compression".
- 3. The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and Minimum passing marks in term work.
- 4. Total 25 Marks (Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks.

Lab Code	Lab Name	Credits (P+TUT)		
1UETDLL7042	Cloud Computing Lab	(1+0)		
	· · · · · · · · · · · · · · · · · · ·			
Lab Prerequisite:	1. Object Oriented Programming with Java			
2. Operating System				
	3. Computer Communication Networks			
Lab Objectives:	To get familiar with: Key concepts of virtualiza	tion & different types of		
	Hypervisors used in virtualization along with implementation			
	1. Concept of On demand Application Delivery like SaaS using Ulteo			
	2. Various Cloud services provided by Amazon Web Se	ervices		
	3. Programming on Platform as a Service cloud			
Lab Outcomes (LOs):	Students should be able to:			
	1. Demonstrate the use of different types of Hyperviso	ors.		
	2. Implement IAAS service using OpenStack.			
	3. Implement software as a service using Uleto OS.			
	4. Implement platform as service on the GCP platform	l.		
	5. Demonstrate Virtual Private cloud & its component	s.		
	6. Demonstrate S3, EC2, DAAB etc. of AWS.			

Lab No.	Experiment Title	LO mapped	Hrs./Lab
I.	Lab Prerequisite		02
1.	Creating and running virtual machines on Hosted Hypervisors like KVM Type 1 ,Vmware Workstation, Oracle Virtualbox	LOI	02
2.	Creating and running virtual machines on Bare-Metal Hypervisors Type 0 like Xen,Vmware ESXI or HyperV	LO1	02
3.	Installation and Configuration of Ulteo to demonstrate on demand Application delivery over web browser to explore SaaS Environment.	LO3	02
4.	To demonstrate installation and Configuration of Open stack Private cloud.	200	02
5.	To demonstrate IAAS using AWS.	LO2	02
6.	To demonstrate virtual private computing & Networking.	LO5	02
7.	Explore database as a service using AWS.		02
8.	To demonstrate Simple storage service (S3) storage.	LO6	02
9.	To study and demonstrate load balancer in AWS.		02
10.	To demonstrate Platform as a Service using Google app Engine/IBM BlueMix/tSuru	LO4	02

Implementation of practicals can be in any language.

1.Hardware Configuration for server: Intel or AMD Multi Core processors (like i3/i5/i7/Quad core/Octa core) with Intel, VT-X or AMD-V support, GB RAM, 500 GB Harddisk, Gigabit Ethernet (GbE) network interface card (NIC)

2.Hardware Configuration for Cloud Client: PC/Laptop/Smart phone/Thin Client or Any device which has built-in Wifi, Ethernet or data connection facility.

3.Software Requirements for Server: Server OS for Physical Sever like CentOS /Fedora/Ubuntu/ Redhat Server, Pre-configured OpenSSH, Xen Server DVD 4.Ulteo DVD

4.Software Requirements for Clients: JDK 1.8 or higher & .NET Framework 4, Netbeans or Eclipse IDEs, OpenSSH client or putty 4.Vmware Workstation, 5.Oracle Virtualbox, 6. Built-in web browser, Internet Connection for each PC with at least 2 MBPS bandwidth and LAN bandwidth of 1 GBPS.

5. Internet Connection for each PC with at least 2 MBPS bandwidth and LAN bandwidth of 1 GBPS.

Project Based Learning Code	Project Based Learning Name	Credits (P+TUT)
1UETPR75	Major Project Lab-A	(3+0)
		l
PBL Prerequisite:	2.PBL Mini Project Lab-2 3.PBL Minor Project Lab-1	
	4.PBL Minor Project Lab-2	
PBL Objectives:	The Project work enables the students,	
	 To develop the required skills and knowledge about research. To analyze a specific problem or issue by using the latest technologies with a 	
	multidisciplinary approach.	
	3. To demonstrate proficiency in the design of a research project, application	
	with appropriate research methods.	
	4. To present and adopt various research ideas with appropriate solution	
PBL Outcomes:	Learner will be able to,	1
	1. Identify formulate, review research literature, and analyse complex engineering problems	
	 Design solutions, components, or processes for complex engineering problems Select appropriate modern engineering tools and analyse data to meet the problem statement. 	
	4. Use standard norms of engineering practices and engage in lifelong learning.	
	5. Excel in writing reports with effective presentation.	
	6. Interact efficiently as an individual with the team members for timely and professional management of project.	

Guidelines:

1. Project Topic:

To proceed with the project work it is very important to select the right topic. Projects can be undertaken on any domain of electronics and recent technology programmes.

- Research and development projects on problems of practical and theoretical interest should be encouraged.
- Project work must be carried out by the group of at least two students and maximum four and must be original.
- Students can certainly take ideas from anywhere, but be sure that they should evolve them in the unique way to suit their project requirements.
- The project work can be undertaken in a research institute or organization/company/any business establishment.
- Students must consult an internal guide along with external guide (if any) in selection of topic.
- Head of department and senior staff in the department will take decisions regarding selection of projects.
- Online log book to be prepared by each group, wherein the group can record weekly work progress, guide/supervisor can verify and record notes/comments.
- Students have to submit a weekly progress report to the internal guide whereas the internal guide has to keep track of the progress of the project and also has to maintain attendance reports. This progress report can be used for awarding the term work marks. In case of industry projects, visit by an internal guide will be preferred.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

Project Report Format:

At the end of semester a project report should preferably contain at least following details,

- 1. Abstract
- 2. CO-PO mapping

- 3. Introduction
- 4. Literature Survey
 - a) Comparative Survey of Existing system
 - b) Limitation of the Existing system or research gap
- 5. Proposed System
 - a) Problem Statement and Objective
 - b) Methodology (your approach to solve the problem)
 - c) Analysis/Framework/ Algorithm
 - d) Details of Hardware & Software
 - e) Design details
 - f) Budget details
 - g) Implementation Plan for next semester
- 6. Conclusion and future scope
- 7. References
- 8. Term Work:

Distribution of marks for term work shall be as follows:

- a) Weekly Attendance on Project Day
- b) Contribution in the Project work
- c) Project Report (Spiral Bound)
- d) Term End Presentation (Internal)
- **9.** The final certification and acceptance of TW ensures the satisfactory performance on the above aspects.

P&O: P&O examination will be based on presentations and demonstrations of Major Project-A.
